

# ANNALES DE L'INSTITUT HENRI POINCARÉ

## PROBABILITÉS ET STATISTIQUES

|                                                                                                                      |                                                      |         |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|---------|
| <b>Random hysteresis loops</b> .....                                                                                 | <i>G. Carinci</i>                                    | 307–339 |
| <b>The Brownian cactus I. Scaling limits of discrete cactuses</b><br><i>N. Curien, J.-F. Le Gall and G. Miermont</i> |                                                      | 340–373 |
| <b>Large scale behaviour of the spatial <math>\Lambda</math>-Fleming–Viot process</b> .....                          | <i>N. Berestycki, A. M. Etheridge and A. Véber</i>   | 374–401 |
| <b>Hydrodynamical behavior of symmetric exclusion with slow bonds</b> .....                                          | <i>T. Franco, P. Gonçalves and A. Neumann</i>        | 402–427 |
| <b>The number of absorbed individuals in branching Brownian motion with a barrier</b> .....                          | <i>P. Maillard</i>                                   | 428–455 |
| <b>On quenched and annealed critical curves of random pinning model with finite range correlations</b> .....         | <i>J. Poisat</i>                                     | 456–482 |
| <b>The scaling limits of a heavy tailed Markov renewal process</b> .....                                             | <i>J. Sobier</i>                                     | 483–505 |
| <b>Limit theorems for one and two-dimensional random walks in random scenery</b> .....                               | <i>F. Castell, N. Guillotin-Plantard and F. Pène</i> | 506–528 |
| <b>Stein's method in high dimensions with applications</b> .....                                                     | <i>A. Röllin</i>                                     | 529–549 |
| <b>Almost everywhere convergence of convolution powers on compact Abelian groups</b> .....                           | <i>J.-P. Conze and M. Lin</i>                        | 550–568 |
| <b>Anisotropic adaptive kernel deconvolution</b><br><i>F. Comte and C. Lacour</i>                                    |                                                      | 569–609 |
