THE ANNALS
of
APPLIED PROBABILITY

An Official Journal of the
Institute of Mathematical Statistics

Articles

A small-time coupling between Λ-coalescents and branching processes
Julien Berestycki, Nathanaël Berestycki and Vlada Limic 449
Universality for one-dimensional hierarchical coalescence processes with double and triple merges . . . . . A. Faggionato, C. Roberto and C. Toninelli 476
Subgeometric rates of convergence of Markov processes in the Wasserstein metric
Oleg Butkovsky 526
Quasi-stationary distributions for randomly perturbed dynamical systems
Mathieu Faure and Sebastian J. Schreiber 553
Path properties of the disordered pinning model in the delocalized regime
Kenneth S. Alexander and Nikos Zygouras 599
Stability of solitons under rapidly oscillating random perturbations of the initial conditions
Ennio Fedrizzi 616
Second order discretization of backward SDEs and simulation with the cubature method . . . . . Dan Crisan and Konstantinos Manolarakis 652
Runge–Kutta schemes for backward stochastic differential equations
Jean-François Chassagneux and Dan Crisan 679
Central limit theorems and diffusion approximations for multiscale Markov chain models
Hye-Won Kang, Thomas G. Kurtz and Lea Popovic 721
Scheduling parallel servers in the nondegenerate slowdown diffusion regime: Asymptotic optimality results . . . . . Rami Atar and Itai Gurvich 760
Time-changed CIR default intensities with two-sided mean-reverting jumps
Rafael Mendoza-Arriaga and Vadim Linetsky 811
The K-process on a tree as a scaling limit of the GREM-like trap model
L. R. G. Fontes, R. J. Gava and V. Gayrard 857

Vol. 24, No. 2—April 2014
