<i>Introduction</i>	3

PART I.

Distribution Functions of One Variable.

<i>Chap. I. Functions of Bounded Variation and Their Fourier-Stieltjes Transforms</i>	8
1. Functions of bounded variation	9
2. Functions of class (T)	10
3. Minimum extrapolation in (T)	13
4. A uniqueness theorem in $(T_2 + T_3)$	19
5. Distribution functions and their characteristic functions	21
6. A uniqueness theorem	22
7. On the approach towards 1 of the modulus of a characteristic function	26
<i>Chap. II. Estimation of the Difference Between Two Distribution Functions by the Behaviour of Their Characteristic Functions in an Interval About the Zero Point</i>	30
1. On $\int_{-\infty}^{\infty} F(x) - G(x) dx$	30
2. On $ F(x) - G(x) $	31
<i>Chap. III. Random Variables. Improvement of the Liapounoff Remainder Term</i>	39
1. Random variables	39
2. Probability distributions in one dimension	40
3. Improvement of the Liapounoff remainder term	42
