## Table of Contents

I. INTRODUCTION	48
II. GRASSMANN GEOMETRIES	52
II.1. Geometries determined by a distinguished family of submanifolds	52
II.2. Local structure theorems	54
II.3. Grassmann geometries determined by a differential form of comass one	56
II.4. Calibrated geometries	59
II.5. The importance of the euclidean case—tangent cones	63
II.6. Differential systems and boundaries of $\varphi$ -submanifolds	67
II.7. The mass and comass ball	73
Appendix II.A. Positive $\varphi$ -currents	82
III. SPECIAL LAGRANGIAN GEOMETRY	85
III.1. The special Lagrangian inequality	86
III.2. The special Lagrangian differential equation	90
A. The explicit formulation	90
B. Ellipticity	93
C. The implicit formulation	95
D. A note	96
III.3. Examples of special Lagrangian submanifolds	97
A. Examples invariant under the maximal torus in $SU_n$	97
B. Examples invariant under $SO_n$	99
C. Special Lagrangian normal bundles	100
III.4. Degenerate projections and harmonic gradients	105
A. Degenerate projections	105
B. Harmonic gradients in three variables	107
III.5. Boundaries of special Lagrangian submanifolds	109
IV. THE EXCEPTIONAL GEOMETRIES	112
IV.1. The fundamental inequalities	112
A. The associator inequality	113
B. The coassociator inequality	116
