

GENERALIZED HARMONIC ANALYSIS.¹

BY

NORBERT WIENER

of CAMBRIDGE, MASS., U. S. A.

	Page
Introduction	118
Chapter I. Precursors of the present theory.	
1. Plancherel's theorem	120
2. Schuster's periodogram analysis	126
Chapter II. Spectra.	
3. The spectrum of an arbitrary function of a single variable	132
4. The total spectral intensity	137
5. Tauberian theorems and spectral intensity	141
6. Bochner's generalizations of harmonic analysis and their spectrum theories	153
7. The Hahn generalization of harmonic analysis	164
Chapter III. Extensions of spectrum theory.	
8. Harmonic analysis in more than one dimension	172
9. Coherency matrices	182
10. Harmonic analysis and transformation groups	195
Chapter IV. Examples of functions with spectra.	
11. Examples of functions with continuous spectra	201
12. Spectra depending on an infinite sequence of choices	210
13. Spectra and integration in function space	214
Chapter V. Almost periodic functions.	
14. The spectrum of an almost periodic function	234
15. The Parseval theorem for almost periodic functions	238
16. The Weierstrass theorem for almost periodic functions	239
17. Certain generalizations of almost periodic functions.	242
