

THE THEORY OF INTEGRATION IN A SPACE OF AN INFINITE NUMBER OF DIMENSIONS.

BY

B. JESSEN

in COPENHAGEN.

Contents.

- § 1. Introduction.
- § 2. The torus-space in an infinite number of dimensions.
- § 3. Limit points. Covering theorems.
- § 4. Continuous and semi-continuous functions.
- § 5. The Lebesgue measure.
- § 6. The construction of nets.
- § 7. The transferring principle.
- § 8. The Jordan measure.
- § 9. The definite and indefinite integrals.
- § 10. The Riemann integral.
- § 11. An important lemma.
- § 12. Application of Fubini's theorem.
- § 13. Infinitely multiple integrals.
- § 14. Representation of a function as the limit of an integral.
- § 15. Strong convergence.
- § 16. Majorised convergence.
- § 17. Fourier series.
- § 18. A special orthogonal system.
- § 19. A case of Birkhoff's ergodic theorem.
- § 20. Application to almost periodic functions.
- § 21. Orthogonal series whose coefficients are analytic functions.
- § 22. General exponential series.
- § 23. Analytic almost periodic functions.
- § 24. Distribution functions.
