

The primary process of a smoothing relation

By K. NAGABHUSHANAM

Contents

Chapter I. Auxiliaries

1. 1. Introduction	422
1. 2. Notation	425
1. 3. Stochastic processes	426
1. 4. Hilbert space of a process	427
1. 5. Random spectral function	427
1. 6. Stationary processes	428
1. 7. Integration of a process	429
1. 8. A lemma	431
1. 9. An integral transformation	431
1. 10. Derivative of a process	434
1. 11. Non-autocorrelated process	434
1. 12. Deterministic nature	434

Chapter II. Inversion: Discrete parameter

2. 1. An outline of the chapter	435
2. 2. General	436
2. 3. Earlier work on inversion	437
2. 4. Two lemmas relating to spectral measures	438
2. 5. On the existence of a stationary solution for $X(t)$	440
2. 6. Relation between the Hilbert spaces of the processes	442
2. 7. Uniqueness of inversion	443
2. 8. Linear inversion	444
2. 9. Roots of modulus unity	447
2. 10. Elementary Gaussian processes	450
2. 11. Infinite smoothing	451
2. 12. Covariance sequence of the primary process	451

Chapter III. Inversion: Continuous parameter

3. 1. An outline of the chapter	452
3. 2. Conditions for obtaining inversion as a smoothing	453
3. 3. Sequence of processes converging to the primary process	458
3. 4. Uniqueness of inversion	462
3. 5. An orthogonal decomposition	462
3. 6. Covariance function of the primary process	463
3. 7. On obtaining $X(t)$ by smoothing $\xi(t)$ over its past values	464
3. 8. On the nature of the arbitrary part in inversion	465

Chapter IV. Primary and resulting processes compared

4. 1. Mean values, variances, spectral saltuses, and Gaussian nature	466
4. 2. A case of metric transitivity	467
