Table of contents

I. PRELIMINARIES	
1.1. Definitions and notations	187
1.2. Recall of some results	189
1.3. Some numerical estimates	191
II. THE COMPOUND PROCESS $z_\omega(t)$	
2.1. Construction of $z_\omega(t)$	193
2.2. Basic properties of $z_\omega(t)$	195
III. ASYMPTOTIC BEHAVIOUR OF THE SAMPLE PATHS	
3.1. Behaviour of $y_1(z_\omega(t))$ and $x_j(z_\omega(t))$	197
3.2. Estimate of T_j	199
3.3. Behaviour of $\chi(z_\omega(t))$	200
3.4. Behaviour of $\theta(z_\omega(t))$	202
IV. THE POISSON REPRESENTATION	
4.1. Some versions of Fatou's theorem	205
4.2. The main result	207

Introduction

Let $z = (z_1, z_2, z_3) \in \mathbb{C}^3$; we write $z_j = x_j + iy_j$ ($1 \leq j \leq 3$); we also use polar coordinates (ϱ, θ) in the (y_2, y_3) -plane when convenient. $H = \{z \mid y_1 - \varrho > 0\}$ is a tube domain over a circular cone; by a linear change of coordinates it is equivalent to the Siegel upper halfplane
