

Stability of queueing networks*

Maury Bramson

University of Minnesota
e-mail: bramson@math.umn.edu

Received June 2008.

Contents

1	Introduction	171
1.1	The $M/M/1$ queue	172
1.2	Basic concepts of queueing networks	173
1.3	Queueing network equations and fluid models	180
1.4	Outline of lectures	183
2	The classical networks	186
2.1	Main results	187
2.2	Stationarity and reversibility	191
2.3	Homogeneous nodes of Kelly type	195
2.4	Symmetric nodes	200
2.5	Quasi-reversibility	207
3	Instability of subcritical queueing networks	220
3.1	Basic examples of unstable networks	221
3.2	Examples of unstable FIFO networks	227
3.3	Other examples of unstable networks	237
4	Stability of queueing networks	243
4.1	Some Markov process background	246
4.2	Results for bounded sets	257
4.3	Fluid models and fluid limits	265
4.4	Demonstration of stability	280
4.5	Appendix	291
