

## ACKNOWLEDGMENT OF PRIORITY

Acknowledgment of Priority to  
“The Distribution of the Ratio of Means to the Square Root of the Sum of  
Variances of a Bivariate Normal Sample”

BY S. A. PATIL AND S. H. LIAO  
*Tennessee Technological University*

In reference to our paper, “The Distribution of the Ratio of Means to the Square Root of the Sum of Variances of a Bivariate Normal Sample,” *Ann. Math. Statist.* **41** (1970) pages 723–728, the authors wish to acknowledge that the probability density function of  $Z$  derived in Section 2 for the case of  $n$  being odd is a special case of equation (4) of Gurland, J. “Distribution of the Maximum of the Arithmetic Mean of Correlated Random Variables,” *Ann. Math. Statist.* **26** (1955) pages 294–300. We are grateful to Dr. P. R. Krishnaiah through whom we learned of this reference.
