

CORRECTION NOTES

CORRECTIONS TO "ON SOME ASYMPTOTICALLY NON-PARAMETRIC COMPETITORS OF HOTELLING'S T^2 "

BY PETER J. BICKEL

University of California, Berkeley

Professor N. Sugiura has kindly pointed out the following numerical errors in this paper (*Ann. Math. Statist.* **36** 160–173):
Page 170, Relation (1) should read

$$2/\pi \leq e_2^M(F) \leq .72,$$

Page 171, Relation (1) should read

$$3/\pi \leq e_1^M(F) \leq .965.$$

Furthermore, the maximum value is reached for ρ between .5 and .51.

The word "concave" in both of the above relations should be replaced by "unimodal".

Finally, relation (6.11) should read:

$$e_1^M(F) = \frac{3}{\pi} \frac{1 + \rho}{2(2 - (3/\pi) \cos^{-1}(\rho/2))}, \quad 0 \leq \rho < 1,$$
$$= \frac{3}{\pi} \frac{1 - \rho}{2((3/\pi) \cos^{-1}(\frac{1}{2}\rho) - 1)}, \quad -1 < \rho \leq 0.$$

CORRECTION TO

"A COMPARATIVE STUDY OF SEVERAL ONE-SIDED GOODNESS-OF-FIT TESTS"

BY D. G. CHAPMAN

In the paper cited above (*Ann. Math. Statist.* **29** (1958) 655–674), it is stated that "any monotone test is admissible." This is in reference to the hypothesis $F = F_0$ against the alternative $F < F_0$. K. Doksum has pointed out that the test $\varphi = \alpha$ is a counter-example to this assertion which should therefore be deleted.
