ORDER RESTRICTED STATISTICAL TESTS ON MULTINOMIAL AND POISSON PARAMETERS: THE STARSHAPED RESTRICTION

BY RICHARD L. DYKSTRA AND TIM ROBERTSON

The Annals of Statistics (1982) **10** 1246–1252

Theorem 3.1 on page 1250 is incorrectly stated and there are errors in the paragraph preceding the statement of the theorem. We thank Rob Kelly for bringing these errors to our attention.

In order to correct the result, replace the theorem and the four lines preceding it by

$$(3.5) \quad \bar{\theta}_i = \hat{\theta}_i \vee \{i/(i+1)\}, \quad i = 1, 2, \dots, k-1,$$

where $\hat{\theta}_i = [\sum_{j=1}^i \bar{x}_j / \sum_{j=1}^{i+1} \bar{x}_j]$. Using the invariance property of maximum likelihood estimation, the estimates of $\phi_1, \phi_2, \dots, \phi_k$ are given by

$$\bar{\phi}_i = (1 - \bar{\theta}_{i-1}) \prod_{j=i}^{k-1} \bar{\theta}_j, \quad i = 1, 2, \dots, k-1,$$

with $\bar{\theta}_0 = 0$ and $\bar{\phi}_k = \sum_{j=1}^k \bar{x}_j$, and the estimates of $\lambda_1, \lambda_2, \dots, \lambda_k$ are given by the following theorem.

THEOREM 3.1 (Shaked, 1979). *The maximum likelihood estimates of $\lambda_1, \lambda_2, \dots, \lambda_k$, subject to the restriction H_1 , are given by*

$$\bar{\lambda}_i = \left[(1 - \bar{\theta}_{i-1}) \prod_{j=i}^{k-1} \bar{\theta}_j \right] \sum_{j=1}^k \bar{x}_j, \quad i = 1, 2, \dots, k-1,$$

$$\bar{\lambda}_k = [1 - \bar{\theta}_{k-1}] \sum_{j=1}^k \bar{x}_j,$$

with $\bar{\theta}_0 = 0$, and

$$\bar{\theta}_i = \frac{\sum_{j=1}^i \bar{x}_j}{\sum_{j=1}^{i+1} \bar{x}_j} \vee \frac{i}{i+1}, \quad i = 1, 2, \dots, k-1.$$
