

Errata for Stephan Ehlen, “CM values of regularized theta lifts and harmonic weak Maaß forms of weight 1,” *Duke Math. J.*, Volume 166, Number 13 (2017), 2447–2519. DOI [10.1215/00127094-2017-0005](https://doi.org/10.1215/00127094-2017-0005).

The current online version of this article, posted on 15 September 2017, supersedes both the advance publication version posted on 9 June 2017 and the version appearing in print copies of volume 166, number 13. The changes are as follows.

On page 2476, a typographical error in the second display of Lemma 4.1 that appeared in the advance publication version has been corrected. The 1 appearing in the lower right entry of the first matrix has been changed to -1 ; the entire display appears correctly in the current online version and in print copies of volume 166, number 13 as

$$\begin{pmatrix} 1 & 0 \\ -r & -1 \end{pmatrix} \mapsto N \quad \text{and} \quad \begin{pmatrix} 0 & \frac{-1}{N} \\ \frac{D-r^2}{4N} & 0 \end{pmatrix} \mapsto \frac{r + \sqrt{D}}{2}.$$

In the list of symbols beginning on page 2513, the page reference numbers were not correctly indexed in print copies of volume 166, number 13. These numbers are correct in the current online version.
