

## REPRESENTATION THEORY OF CHERN-SIMONS OBSERVABLES

ANTON YU. ALEKSEEV AND VOLKER SCHOMERUS

### CONTENTS

1. Introduction .....	448
Part I. Background review .....	448
2. Chern-Simons theory and the moduli space of flat connections .....	448
2.1. Combinatorial description .....	449
2.2. Poisson structure of the moduli space .....	451
3. Quantization of the moduli space .....	454
3.1. Quasi-triangular Hopf algebras .....	454
3.2. The graph algebra $\mathcal{L}_{g,m}$ .....	456
3.3. Integration and *-properties of graph algebras .....	460
3.4. The moduli algebra .....	462
3.5. The finite-dimensional case .....	464
4. Summary of results .....	466
4.1. Representation theory of the moduli algebra .....	466
4.2. The action of the mapping class group on the moduli algebra .....	467
4.3. Comparison to other approaches .....	469
Part II. Representation theory of the moduli algebra .....	469
5. The loop algebra and its representations .....	470
5.1. The loop algebra $\mathcal{L}$ .....	470
5.2. Representation theory of the loop algebra $\mathcal{L}$ .....	471
5.3. Gauss decomposition and loop-symmetry isomorphism .....	474
6. The moduli algebra on a sphere with marked points .....	475
6.1. The graph algebra $\mathcal{L}_m$ .....	476
6.2. Representation theory of the graph algebra $\mathcal{L}_m$ .....	476
6.3. The moduli algebra $\mathcal{M}_m^{\{K_v\}}$ .....	479
6.4. The first pinching theorem .....	482
7. The handle algebra and its representations .....	484
7.1. The $AB$ -algebra .....	485
7.2. Representation theory of the $AB$ -algebra .....	485
7.3. Embedding the loop algebra into the $AB$ -algebra .....	487

Received 19 December 1995.

Alekseev's visit to Harvard University was supported by the Alfred P. Sloan Foundation, grant number 90-10-13.

Schomerus supported in part by Department of Energy grant number DE-FG02-88ER25065.
