

SUPERCURVES, THEIR JACOBIANS, AND SUPER KP EQUATIONS

M. J. BERGVELT AND J. M. RABIN

CONTENTS

1. Introduction	2
2. Supercurves and their Jacobians	4
2.1. Supercurves	4
2.2. Duality and $N = 2$ curves	5
2.3. Super Riemann surfaces	10
2.4. Integration on supercurves	11
2.5. Integration on the universal cover	13
2.6. Sheaf cohomology for supercurves	15
2.7. Generic SKP curves	16
2.8. Riemann bilinear relations	17
2.9. The period map and cohomology	18
2.10. $\mathcal{C}\mathcal{O}_X$ as an extension of $\mathcal{B}er_X$	21
2.11. $\mathcal{C}\mathcal{O}_X$ as an extension of $\mathcal{B}\hat{e}r_X$ and symmetric period matrices	24
2.12. Moduli of invertible sheaves	25
2.13. Effective divisors and Poincaré sheaf for generic SKP curves	27
2.14. Berezinian bundles	29
2.15. Bundles on the Jacobian; θ -functions	31
3. Super Grassmannian, τ -function, and Baker function	34
3.1. Super Grassmannians	34
3.2. The Chern class of $\mathcal{B}er(\mathcal{S}gr)$ and the $gl_{\infty \infty}$ cocycle	36
3.3. The Jacobian super Heisenberg algebra	38
3.4. Baker functions, the full super Heisenberg algebra, and τ -functions.	39
4. The Krichever map and algebro-geometric solutions	42
4.1. The Krichever map	42
4.2. The Chern class of the Ber bundle on $\text{Pic}^0(X)$	44
4.3. Algebro-geometric τ - and Baker functions	45
Appendix A. Duality and Serre duality	48
A.1. Duality of Λ -modules	48
A.2. Serre duality of supermanifolds	49
Appendix B. Real structures and conjugation	50

Received 10 January 1996.
