

BARWISE: INFINITARY LOGIC AND ADMISSIBLE SETS

H. JEROME KEISLER AND JULIA F. KNIGHT

CONTENTS

0. Introduction	5
1. Background on infinitary logic	5
1.1. Expressive power of $L_{\omega_1\omega}$	6
1.2. The back-and-forth construction	7
1.3. The Scott isomorphism theorem	8
1.4. $\omega$ -logic	11
1.5. Familiar theorems	12
1.6. Failure of compactness	13
2. Background on admissible sets	14
2.1. $\Delta_0$ formulas and $\Sigma$ -formulas in set theory	14
2.2. Axioms of $KP$	15
2.3. Examples of admissible sets	16
2.4. The admissible set $\mathbb{L}(\omega_1^{CK})$	16
3. Admissible fragments	18
3.1. Completeness and compactness	18
3.2. Computable structures via Barwise compactness	19
3.3. Other applications of Barwise compactness	21
4. Admissible sets over $\mathcal{M}$	23
4.1. $KP$ with urelements	23
4.2. Truncation lemma	25
4.3. Admissible sets above $\mathcal{M}$	26
4.4. Inductive definitions	26
5. Saturation properties	28
5.1. Computable saturation	28
5.2. $\Sigma_A$ -saturation	31
6. Conclusion	32
