

Reduction of Associate Classes for Block Designs and Related Combinatorial Arrangements

Sanpei KAGEYAMA

(Received May 13, 1974)

Contents

0. Introduction and summary	528
Part I. Reductions for the number of associate classes for PBIB designs	530
1. Association schemes, PBIB designs and BIB designs	531
2. Necessary and sufficient conditions for reductions	535
3. PBIB designs validating necessary and sufficient conditions for reductions	538
4. Relationship among coincidence numbers, latent roots and second kind parameters with respect to reductions	543
4.1. Reductions for PBIB designs of Kronecker product type	544
4.2. Reductions for general PBIB designs	546
5. Reductions for a certain PBIB design	555
6. Algebraic structures of PBIB designs obtained by generalization of Sillitto's product	557
Part II. Some types of reducible association schemes	565
7. Nested type of association schemes	565
8. Orthogonal Latin square type of association schemes	567
9. Factorial type of association schemes	570
10. Other types of association schemes	573
10.1. m -associate cyclical type of association schemes	573
10.2. Generalized right angular association scheme	573
10.3. Rectangular lattice type association scheme	576
10.4. Triangular type association scheme	578
11. Remarks	579
Part III. Combinatorial properties of a balanced or partially balanced block design	579
12. BB designs and PBB designs	580
13. Properties of BB designs and PBB designs	583
14. Construction of BB designs	585
15. Construction of PBB designs	593
16. μ -resolvability of BB designs and PBB designs	600
17. Reductions for the number of associate classes for PBB designs	603
18. Inequalities for incomplete block designs	608
Acknowledgments	615
