

On Potentials in Locally Compact Spaces.)*

Makoto OHTSUKA

(Received September 18, 1961)

Table of Contents

	Page
Introduction	136
Chapter I. Fundamental notions	137
1. 1. Potentials and exceptional sets	137
1. 2. Principles	141
1. 3. Relations among principles	145
1. 4. Local behavior of potentials	159
1. 5. Global properties of potentials	179
1. 6. Topologies	187
1. 7. Strong completeness	195
1. 8. Capacity	201
1. 9. Sequence of potentials	207
1.10. Notes and questions	210
Chapter II. Gauss variation	212
2. 1. Potential of an extremal measure	212
2. 2. Problem on compact sets	219
2. 3. Some general cases	224
2. 4. Change of extremal values	228
2. 5. Behavior at $x=0$ and $x=\infty$	240
2. 6. Further study of the graph of $I(\mu_x)$	247
2. 7. Examples	254
2. 8. Unconditional variation	264
2. 9. Multiple variational problem	268
2.10. Applications to energy principles	272
2.11. Maximum and domination principles	277
2.12. Notes and questions	284
Chapter III. Inner and outer problems	285
3. 1. Inner variational problem	285
3. 2. Inner problem for kernels of positive type	291
3. 3. Outer variational problem	299
3. 4. Sets with $I_X^i(g, x, f) = \infty$ or with $I_X^e(g, x, f) = \infty$	308
3. 5. Change of sets	320
3. 6. Coincidence of $I_X^i(g, x, f)$ and $I_X^e(g, x, f)$	327
3. 7. Inequalities for $I_X^i(g, x, f)$ and $I_X^e(g, x, f)$	329
3. 8. Change of conditions	331
3. 9. Graphs of $I_X^i(g, x, f)$ and $I_X^e(g, x, f)$	336
3.10. Unconditional inner and outer problems	340
3.11. Notes and questions	345
Bibliography	347
Index	351
