

EDITORIAL

TERRY GOODMAN

It is not difficult to find numerous reports, articles, etc. that focus on the poor mathematics performance of American students. Most of these documents suggest a number of possible reasons for this poor performance as well as ways the authors believe the problem should be addressed.

Keith Devlin, a mathematician from Stanford University (and the Math Guy on National Public Radio) has recently written an article entitled “Wanted: An Apollo Program for Math”

[http://thirteencelebration.org/blog/edblog/
edblog-wanted-an-apollo-program-for-math/1660/](http://thirteencelebration.org/blog/edblog/edblog-wanted-an-apollo-program-for-math/1660/).

I would encourage you to read this article (I found it to be thought-provoking) and I would be interested in hearing responses from any of you who would like to share your thoughts with our readers.
