

37. On the Roots of the Characteristic Equation of a Certain Matrix.

By Masatsugu TSUJI.

Mathematical Institute, Tokyo Imperial University.

(Rec. March 1, 1929. Comm. by T. TAKAGI, M.I.A., March 12, 1929.)

The well-known theorem of Frobenius, that all the roots of the characteristic equation of a unitary matrix are of absolute value 1 is recently proved by Mr. H. Aramata¹⁾ and Mr. R. Brauer²⁾ simply. I will here give another simple proof and a generalization of it.

Theorem. Let the transformation,

$$\left\{ \begin{array}{l} X_1 = a_{11}x_1 + \dots + a_{1n}x_n, \\ \dots\dots\dots \\ X_n = a_{n1}x_1 + \dots + a_{nn}x_n, \end{array} \right. \quad \left\{ \begin{array}{l} \bar{X}_1 = \bar{a}_{11}\bar{x}_1 + \dots + \bar{a}_{1n}\bar{x}_n, \\ \dots\dots\dots \\ \bar{X}_n = \bar{a}_{n1}\bar{x}_1 + \dots + \bar{a}_{nn}\bar{x}_n, \end{array} \right.$$

\bar{a}_{ik}, \bar{x}_i being conjugate complex of a_{ik} and x_i , make a function $F(x_1, \bar{x}_1, \dots, x_n, \bar{x}_n)$ invariant, such that

$$(1) \quad F(X_1, \bar{X}_1, \dots, X_n, \bar{X}_n) = F(x_1, \bar{x}_1, \dots, x_n, \bar{x}_n),$$

where F satisfies the following conditions :

- (i) $F(\lambda x_1, \bar{\lambda} \bar{x}_1, \dots, \lambda x_n, \bar{\lambda} \bar{x}_n) = |\lambda|^k F(x_1, \bar{x}_1, \dots, x_n, \bar{x}_n)$, k being a real number.
- (ii) $F(x_1, \bar{x}_1, \dots, x_n, \bar{x}_n) \neq 0, \neq \infty$ for $|x_1| + |x_2| + \dots + |x_n| > 0$.

Then all the roots of the characteristic equation of the matrix $A = (a_{ik})$ are of absolute value 1.

When $F = x_1 \bar{x}_1 + \dots + x_n \bar{x}_n$, A becomes a unitary matrix.

Proof. Let λ be a root of the characteristic equation of A . Then the linear equations,

$$\left\{ \begin{array}{l} \lambda x_1 = a_{11}x_1 + \dots + a_{1n}x_n, \\ \dots\dots\dots \\ \lambda x_n = a_{n1}x_1 + \dots + a_{nn}x_n, \end{array} \right.$$

has a solution (x_1, x_2, \dots, x_n) such that
