A TORELLI-TYPE THEOREM FOR GRAVITATIONAL INSTANTONS

P. B. KRONHEIMER

1. Introduction

In an earlier paper [10], a construction was described which produced families of 4-dimensional hyper-Kähler manifolds (one family for each finite subgroup of SU(2)), the members of which were asymptotically locally Euclidean (ALE). Our purpose here is to demonstrate the completeness of this construction: we shall show that every ALE hyper-Kähler 4-manifold is isometric to a member of one of the families obtained in [10].

For us, a Riemannian 4-manifold is ALE if it has just one end and if some neighborhood of infinity has a finite covering space $\tilde{V}$ diffeomorphic to the complement of the unit ball in $\mathbb{R}^4$; the Riemannian metric $g^{ij}$ on $\tilde{V}$ is required asymptotically to approximate the Euclidean metric $\delta^{ij}$ on $\mathbb{R}^4$, so that in the natural coordinates $x_i$ one has

$$g^{ij} = \delta^{ij} + a^{ij}$$

with $\partial^p a^{ij} = O(r^{-4-p})$, $p \geq 0$, where $r^2 = \Sigma x_i^2$ and $\partial$ denotes differentiation with respect to the coordinates $x_i$. We recall that a hyper-Kähler manifold carries three complex structures $I, J, K$ and that these give three (closed) Kahler 2-forms $\omega, \omega_2, \omega_3$. With this notation, the main result of [10] is the following. Let $\Gamma$ be a finite subgroup of SU(2) and let $X$ be the smooth 4-manifold underlying the minimal resolution of the complex quotient singularity $\mathbb{C}^2/\Gamma$.

**Theorem 1.1.** Let three cohomology classes $\alpha_1, \alpha_2, \alpha_3 \in H^2(X; \mathbb{R})$ be given which satisfy the nondegeneracy condition

(*) for each $\Sigma \in H_2(X; \mathbb{Z})$ with $\Sigma \cdot \Sigma = -2$ there exists $i \in \{1, 2, 3\}$ with $\alpha_i(\Sigma) \neq 0$.

Then there exists on $X$ an ALE hyper-Kähler structure for which the cohomology classes of the Kahler forms $[\omega_i]$ are the given $\alpha_i$.

The results of this paper were announced in [10]. They comprise the following two theorems, which will be proved in §§2 and 3, respectively.

Received June 12, 1987 and, in revised form, January 29, 1988.
