

FILLING RIEMANNIAN MANIFOLDS

MIKHAEL GROMOV

TABLE OF CONTENTS

0.	Essential manifolds	2
	0.1. Main isosystolic inequality	3
	0.2. An upper bound for the isosystolic constant	4
	0.3. Historical remarks and references	4
1.	Filling radius	7
	1.1. Imbedding $V \subset L^\infty(V)$	7
	1.2. An upper bound for the filling radius	9
2.	Filling volume	11
	2.1. Filling volumes of hypersurfaces	12
	2.2. The filling volume of the boundary ∂W of W	12
	2.3. Isoperimetric inequality	14
	2.4. On the relation between the filling volume and the filling radius	15
3.	Filling inequalities for submanifolds V in \mathbf{R}^N	16
	3.1. The method of Federer-Fleming	16
	3.2. The isoperimetric inequality of Federer-Fleming	19
	3.3. The Federer-Fleming inequality with a constant C_n for $n = \dim V$	20
	3.4. Isoperimetric inequalities in Riemannian manifolds	25
4.	Filling in Banach spaces	28
	4.1. Normalization of Haar's measure	28
	4.2. Isoperimetric inequalities in Banach spaces	34
	4.3. Filling radius in Banach spaces	35
	4.4. Isosystolic inequalities for open manifolds	39
	4.5. The filling radius and the injectivity radius	41
5.	Short geodesics in surfaces	44
	5.1. The height function and the areas of balls	45
	5.2. A sharp isosystolic inequality for surfaces	48
	5.3. Isosystolic inequalities for surfaces of large genus $\rightarrow \infty$	50
	5.4. Pairs of short loops in surfaces V of negative Euler characteristic	53
