

# ADVANCES IN DIFFERENTIAL EQUATIONS

Volume 15, Numbers 9-10

September/October 2010

---

## CONTENTS

<b>Marianna A. Shubov</b> , Solvability of reduced Possio integral equation in theoretical aeroelasticity .....	801
<b>Mathieu Colin and Pierre Fabrie</b> , A variational approach for optimal control of the Navier-Stokes Equations .....	829
<b>Takashi Suzuki and Ryo Takahashi</b> , Degenerate parabolic equation with critical exponent derived from the kinetic theory, IV, structure of the blowup set .....	853
<b>Markus Biegert and Mahamadi Warma</b> , Some quasi-linear elliptic equations with inhomogeneous generalized Robin boundary conditions on “bad” domains .....	893
<b>Roger Peres de Moura and Didier Pilod</b> , Local well-posedness for the nonlocal nonlinear Schrödinger equation below the energy space ....	925
<b>Mihaela Ignatova and Igor Kukavica</b> , Unique continuation and complexity of solutions to parabolic partial differential equations with Gevrey coefficients .....	953
<b>Giovambattista Amendola, Adele Manes, and Carla Vettori</b> , Maximum recoverable work in the ionosphere .....	977
