ADVANCES IN DIFFERENTIAL EQUATIONS

Volume 15, Numbers 9-10

September/October 2010

CONTENTS

Marianna A. Shubov, Solvability of reduced Possio integral equation in theoretical aeroelasticity	801
Mathieu Colin and Pierre Fabrie, A variational approach for optimal control of the Navier-Stokes Equations	829
Takashi Suzuki and Ryo Takahashi, Degenerate parabolic equation with critical exponent derived from the kinetic theory, IV, structure of the blowup set	853
Markus Biegert and Mahamadi Warma, Some quasi-linear elliptic equations with inhomogeneous generalized Robin boundary conditions on "bad" domains	893
Roger Peres de Moura and Didier Pilod, Local well-posedness for the nonlocal nonlinear Schrödinger equation below the energy space	925
Mihaela Ignatova and Igor Kukavica, Unique continuation and complexity of solutions to parabolic partial differential equations with Gevrey coefficients	953
Giovambattista Amendola, Adele Manes, and Carla Vettori, Maximum recoverable work in the ionosphere	977
