

# ANNALES DE L'INSTITUT HENRI POINCARÉ

## PROBABILITÉS ET STATISTIQUES

<b>Random walk on a building of type <math>\tilde{A}_r</math> and Brownian motion of the Weyl chamber . . . . .</b>	<i>B. Schapira</i>	289–301
<b>A two-scale approach to logarithmic Sobolev inequalities and the hydrodynamic limit <i>N. Grunewald, F. Otto, C. Villani and M. G. Westdickenberg</i></b>		302–351
<b>Adaptive goodness-of-fit testing from indirect observations <i>C. Butucea, C. Matias and C. Pouet</i></b>		352–372
<b>Almost sure functional central limit theorem for ballistic random walk in random environment <i>F. Rassoul-Agha and T. Seppäläinen</i></b>		373–420
<b>Brownian penalisations related to excursion lengths, VII <i>B. Roynette, P. Vallois and M. Yor</i></b>		421–452
<b>Moderate deviations for stationary sequences of bounded random variables <i>J. Dedecker, F. Merlevède, M. Peligrad and S. Utev</i></b>		453–476
<b>Some properties of superprocesses under a stochastic flow <i>K. Lee, C. Mueller and J. Xiong</i></b>		477–490
<b>Dynamical sensitivity of the infinite cluster in critical percolation <i>Y. Peres, O. Schramm and J. E. Steif</i></b>		491–514
<b>Random walk local time approximated by a Brownian sheet combined with an independent Brownian motion <i>E. Csáki, M. Csörgő, A. Földes and P. Révész</i></b>		515–544
<b>On the regularity of stochastic currents, fractional Brownian motion and applications to a turbulence model <i>F. Flandoli, M. Gubinelli and F. Russo</i></b>		545–576
<b>Large deviations for voter model occupation times in two dimensions . . . . .</b>	<i>G. Maillard and T. Mountford</i>	577–588
