

ANNALES DE L'INSTITUT HENRI POINCARÉ

PROBABILITÉS ET STATISTIQUES

Nonequilibrium fluctuations for a tagged particle in one-dimensional sublinear zero-range processes	
<i>M. Jara, C. Landim and S. Sethuraman</i>	611–637
Perturbing transient random walk in a random environment with cookies of maximal strength	
<i>E. Bauernschubert</i>	638–653
Invariance principle for Mott variable range hopping and other walks on point processes	
<i>P. Caputo, A. Faggionato and T. Prescott</i>	654–697
Einstein relation for biased random walk on Galton–Watson trees	
<i>G. Ben Arous, Y. Hu, S. Olla and O. Zeitouni</i>	698–721
Weak quenched limiting distributions for transient one-dimensional random walk in a random environment	
<i>J. Peterson and G. Samorodnitsky</i>	722–752
Strong disorder in semidirected random polymers	
<i>N. Zygouras</i>	753–780
Hierarchical pinning model in correlated random environment	
<i>Q. Berger and F. L. Toninelli</i>	781–816
Scale-free percolation	
<i>M. Deijfen, R. van der Hofstad and G. Hooghiemstra</i>	817–838
Restricted exchangeable partitions and embedding of associated hierarchies in continuum random trees	
<i>B. Chen and M. Winkel</i>	839–872
Persistence of iterated partial sums	
<i>A. Dembo, J. Ding and F. Gao</i>	873–884
Representation formula for the entropy and functional inequalities	
<i>J. Lehec</i>	885–899
Spatially adaptive density estimation by localised Haar projections	
<i>F. Gach, R. Nickl and V. Spokoiny</i>	900–914
