A stochastic Gronwall inequality and applications to moments, strong completeness, strong local Lipschitz continuity, and perturbations ........................................... A. Hadde, M. Hutzenthaler and S. Mazzonetto 603–626
New lower bounds for trace reconstruction ............................................................ Z. Chase 627–643
The spectral gap of sparse random digraphs .......................................................... S. Coste 644–684
Two-temperatures overlap distribution for the 2D discrete Gaussian free field ........ M. Pain and O. Zindy 685–699
Stochastic optimal transport with free end time ................................................... S. Dweik, N. Ghoussoub, Y.-H. Kim and A. Z. Palmer 700–725
Stochastic approximation of quasi-stationary distributions for diffusion processes in a bounded domain M. Benaim, N. Champagnat and D. Villemonais 726–739
Total variation estimates in the Breuer–Major theorem ......................................... D. Nualart and H. Zhou 740–777
Fractional moments of the stochastic heat equation .............................................. S. Das and L.-C. Tsai 778–799
The Schelling model on Z ..................................................................................... M. Deijfen and T. Vilkas 800–814
Asymptotics of maximum likelihood estimators based on Markov chain Monte Carlo methods B. Miasojedow, W. Niemiro and W. Rejchel 815–829
Limit law for the cover time of a random walk on a binary tree ............................. A. Dembo, J. Rosen and O. Zeitouni 830–855
Conditional measures for Pfaffian point processes: Conditioning on a bounded domain A. I. Bufetov, F. D. Cunden and Y. Qiu 856–871
Gaussian fluctuations for the directed polymer partition function in dimension \( d \geq 3 \) and in the whole \( L^2 \)-region ................................................................. C. Cosco and S. Nakajima 872–889
Total variation distance for discretely observed Lévy processes: A Gaussian approximation of the small jumps .......................................................... A. Carpentier, C. Duval and E. Mariucci 901–939
Brownian motion on stable looptrees .................................................................. E. Archer 940–979
Scaling limits and fluctuations for random growth under capacity rescaling ........ G. Liddle and A. Turner 980–1015
Conformal covariance of the Liouville quantum gravity metric for \( \gamma \in (0, 2) \) .......... E. Guynne and J. Miller 1016–1031
McKean–Vlasov SDEs under measure dependent Lyapunov conditions W. R. P. Hammersley, D. Siška and Ł. Szpruch 1032–1057
Directed polymer in \( \gamma \)-stable random environments ...................................... R. Viveros 1081–1102
Rare event process and entry times distribution for arbitrary null sets on compact manifolds ...... F. Yang 1103–1135
On conditioning a self-similar growth-fragmentation by its intrinsic area J. Bertoin, N. Curien and I. Kortchemski 1136–1156
Quantitative homogenization of differential forms ............................................. P. Dario 1157–1202
