

THE ANNALS *of* APPLIED PROBABILITY

AN OFFICIAL JOURNAL OF THE
INSTITUTE OF MATHEMATICAL STATISTICS

Articles

- Reconstruction of a multidimensional scenery with a branching random walk
HEINRICH MATZINGER, ANGELICA PACHON AND SERGUEI POPOV 651
- Optimal Skorokhod embedding given full marginals and Azéma–Yor peacocks
SIGRID KÄLLBLAD, XIAOLU TAN AND NIZAR TOUZI 686
- Chi-square approximation by Stein’s method with application to Pearson’s statistic
ROBERT E. GAUNT, ALASTAIR M. PICKETT AND GESINE REINERT 720
- On the connection between symmetric N -player games and mean field games
MARKUS FISCHER 757
- Finite-length analysis on tail probability for Markov chain and application to simple
hypothesis testing SHUN WATANABE AND MASAHITO HAYASHI 811
- A piecewise deterministic scaling limit of lifted Metropolis–Hastings in the Curie–Weiss
model JORIS BIERKENS AND GARETH ROBERTS 846
- Equivalence of ensembles for large vehicle-sharing models
CHRISTINE FRICKER AND DANIELLE TIBI 883
- The rounding of the phase transition for disordered pinning with stretched exponential
tails HUBERT LACONIN 917
- Scaling limit of the corrector in stochastic homogenization
JEAN-CHRISTOPHE MOURRAT AND JAMES NOLEN 944
- Optimal consumption under habit formation in markets with transaction costs and random
endowments XIANG YU 960
- Quickest detection problems for Bessel processes PETER JOHNSON AND
GORAN PESKIR 1003
- The asymptotic variance of the giant component of configuration model random graphs
FRANK BALL AND PETER NEAL 1057
- From stochastic, individual-based models to the canonical equation of adaptive dynamics
in one step MARTINA BAAR, ANTON BOVIER AND NICOLAS CHAMPAGNAT 1093
- Logarithmic tails of sums of products of positive random variables bounded by one
BARTOSZ KOŁODZIEJEK 1171
- Invariance principles for operator-scaling Gaussian random fields
HERMINE BIERMÉ, OLIVIER DURIEU AND YIZAO WANG 1190
