

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields: such as frequency distributions, estimating and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possible contribution of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional "double abstracts" for papers where this size is not sufficient to represent the paper. The language is English; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published moreover a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

<i>Annual Subscription</i>	£7. 10s. (U.S.A. \$24.00)
<i>Single Number</i>	£2. 5s. (U.S.A. \$ 7.00)
<i>Loose Leaf Binders for Single Abstract Sheets</i>	16s. 3d. including postage and packing.

TECHNOMETRICS

A Journal of Statistics for the Physical, Chemical and Engineering Sciences

CONTENTS

TECHNOMETRICS, Vol. 9, No. 3, AUGUST 1967

A Two-Stage Subsampling Procedure for Ranking Means of Finite Populations with an Application to Bulk Sampling Problems	R. E. Bechhofer
Sampling Mixtures of Particles	Martin Knott
Estimation of Variance Components in Two-Stage Nested Designs with Composite Samples	Keith Kussmaul and R. L. Anderson
Estimation of Spectra After Hard Clipping of Gaussian Time Processes	Melvin Hinich
The Determination of Single Sampling Attribute Plans with Given Producer's and Consumer's Risk	A. Hald
Variables Sampling Plans Based on the Normal Distribution	D. B. Owen
Classical and Inverse Regression Methods of Calibration	Richard G. Krutchkoff
An Application of Numerical Integration Techniques to Statistical Tolerancing	David H. Evans

NOTES

Methods of Obtaining the Average Sample Run Length of Cumulative Sum Schemes when the Cumulated Parameter is Non-Normal	Kenneth W. Kemp
Confidence Interval for the Availability Ratio	Truman Lewis and H. L. Gray
Three Dimensional Models of Extreme Vertices Designs for Four Component Mixtures	W. J. Diamond
On the Distribution of the Bivariate Range	T. Cacoullos and H. DeCicco
A Note on the Graphical Analysis of Multidimensional Contingency Tables	D. R. Cor and Elizabeth Lauh

QUERIES

Degrees of Freedom for Chi-Square	Answered by H. Chernoff
Additional Responses to Query 20	

BOOK REVIEWS

The purpose of **TECHNOMETRICS** is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact **TECHNOMETRICS** Post Office Box 587 Benjamin Franklin Station Washington, D. C. 20004.
