### BIOMETRICS Journal of the Biometric Society

CONTENTS Vol. 27, No. 3

September 1971

Practical problems in a method of cluster analysis  F. H. C. Marriott Approximate small-sample distributions for multivariate two-sample nonparametric tests  R. A. Bradley, K. M. Patel, and D. D. Wackerly
Linear discriminant analysis: loss of discriminating power when a variate is omitted  On the estimation of missing data in the multivariate linear model  Effects of collapsing multidimensional contingency tables  Young M. M. Bishop  Problems arising in cathacter from retrospective survey data the latent periods of juvenile cancers initiated  by obstetric raderic raderic raderic and D. Graderic Markov chain methods in chain binomial epidemic models  Estimation of hit number  An examination and extension of Leslie's test of equal catchability  A. D. Carothers  Some sampling problems in fishery work  Best quadratic unbiased estimation of variance components from unbalanced data in the 1-way classification  E. C. Townsend and S. R. Searle
A revised analysis of plant competition experiments C. A. McGilchrist and Precision specifications for the estimation of treatment differences An iterative procedure for analysing log-linear models International aspects of the study of adverse reactions to drugs The use of prior information in the testing of new drugs Neue Ergebnisse zur statistischen Vorgeschichte der Mendelschen Versuche  C. A. McGilchrist and J. Redransk J. Vedransk B. W. Royall B. W. Royall D. M. Allen F. Weiling
Query Analysis of drug effects on body temperature
M. S. Bartlett, Jennifer M. Brennan, and J. N. Pollock Design of experiments: the single cycle sine wave model A. F. Johnson Mathematical model for poultry egg production D. H. McNally Graphical Monte Carlo type I error rates for multiple comparison procedures T. J. Boardman and D. R. Moffitt
Book Reviews
Biometrics is published quarterly. Its objects are to describe and exemplify the use of mathematical and statistical methods in biological and related sciences in a form assimilable by experimenters. The annual non-member subscription rate is \$15.00. Inquiries, non-member subscriptions, and orders for back issues, should be addressed to: Biometrics Business Office, Department of Experimental Statistics, North Carolina State University, Raleigh, North Carolina 27607 U.S.A. Editorial correspondence should be directed to: Biometrics Editorial Office, Department of Biostatistics, School of Public Health, University of North Carolina, Chapel Hill, North Carolina 27514 U.S.A.

## **TECHNOMETRICS**

# A Journal of Statistics for the Physical, Chemical and Engineering Sciences

### CONTENTS

#### TECHNOMETRICS, Vol. 13, No. 3, AUGUST 1971

Mean Square Error of Prediction as a Criterion for Selecting Variables  Discussion of Invited Papers On the Determination of Single Sampling Attribute Plans Based Upon a Linear Cost Model and a Prior Distribution On Detecting a Signal in N Stationarily Correlated Noise Series On Detecting a Signal in N Stationarily Correlated Noise Series Best Linear Invariant Estimation for Weibull Parameters Under Progressive Censoring N. R. Mann An Exact Lower Confidence Bound for the Reliability of a Series System Where Each Component Has an Exponential Time to Failure Distribution Reliability Estimation for the Generalized Gamma Distribution and Robustness of the Weibull Model L. J. Bain, H. W. Hager, and C. E. Antle Designs of Experiments as 'Doubly Telescoping' Sequences of Blocks with Application to a Nuclear Reactor Experiment Linear Combinations in Designing Experiments P. C. C. Linear vs. Cubic A. F. Johnson D. K. Luers and R. H. Wenning J. K. Luers and R. M. A. Sylvestre W. H. Lawton and W. A. Sylvestre W. H. Lawton and W. A. Sylvestre G. C. Tiao and M. M. Ali Telerator Non-normanty on Inferences About Variance Components G. C. Tiao and M. M. Ali Telerator Non-normanty on Inferences About Variance Components Tolerance Limits Based on Range and Mean Range W. H. Frawley, C. H. Kapadia, J. N. K. Rao, and D. B. Owen Some Results Relevant to Choice of Sum and Sum-of-Product Algorithms A. Rule of Thumb for Component of the Binomial Parameter n Notes A Rule of Thumb for Component of the Binomial Parameter n A. Gibbs-type Phenomenon in the Failure Rates of Parallel Systems A Set of Three Mutually Orthogonal Latin Squares of Order 15 A. Hedayat On Comparison of Waiting Time Versus Counting Techniques T. L. Connell Book Reviews	Errata
Discussion of Invited Papers  On the Determination of Single Sampling Attribute Plans Based Upon a Linear Cost Model and a Prior Distribution  On Detecting a Signal in N Stationarily Correlated Noise Series  Best Linear Invariant Estimation for Weibull Parameters Under Progressive Censoring  N. R. Mann  An Exact Lower Confidence Bound for the Reliability of a Series System Where Each Component Has an Exponential Time to Failure Distribution  Reliability Estimation for the Generalized Gamma Distribution and Robustness of the Weibull Model  L. J. Bain, H. W. Hager, and C. E. Antle  Designs of Experiments as 'Doubly Telescoping' Sequences of Blocks with Application to a Nuclear Reactor  Experiment  A. G. Holms and S. M. Sidik  Linear Combinations in Designing Experiments  P. C. C. Ties and R. H. Wenning  A. F. Johnson  J. K. Luers and R. H. Wenning  J. R. Green  A. F. Johnson  J. K. Luers and R. H. Wenning  W. H. Lawton and W. A. Sylvestre  G. C. Ties and M. M. Ali  Tolerance Limits Based on Range and Mean Range  W. H. Frawley, C. H. Kapadia, J. N. K. Rao, and D. B. Owen  Some Results Relevant to Choice of Sum and Sum-of-Product Algorithms  A Rule of Thumb for Discovery Served Science Components  A Rule of Thumb for Discovery Served Science Components  A Rule of Thumb for Discovery Science Components  A Rule of Thumb for Discov	A Gibbs-type Phenomenon in the Failure Rates of Parallel Systems A Set of Three Mutually Orthogonal Latin Squares of Order 15 On Comparison of Waiting Time Versus Counting Techniques  BOOK REVIEWS  M. C. Bryso A. Hedayo T. L. Conne
Discussion of Invited Papers  On the Determination of Single Sampling Attribute Plans Based Upon a Linear Cost Model and a Prior Distribution  On Detecting a Signal in N Stationarily Correlated Noise Series Best Linear Invariant Estimation for Weibull Parameters Under Progressive Censoring N. B. Otte Some Results Relevant to Choice of Sum and Sum-of-Product Algorithms E. A. Youngs and E. M. Crame Bayesian Estimation of the Binomial Parameter n N. R. Draper and I. Guttma.
Discussion of Invited Papers  On the Determination of Single Sampling Attribute Plans Based Upon a Linear Cost Model and a Prior Distribution  On Detecting a Signal in N Stationarily Correlated Noise Series Best Linear Invariant Estimation for Weibull Parameters Under Progressive Censoring N. R. Mann  An Exact Lower Confidence Bound for the Reliability of a Series System Where Each Component Has an  Exponential Time to Failure Distribution  Robustness of the Weibull Model  L. J. Bain, H. W. Hager, and C. E. Antle  Designs of Experiments as 'Doubly Telescoping' Sequences of Blocks with Application to a Nuclear Reactor  Experiment  A. G. Holms and S. M. Sidik  Linear Combinations in Designing Experiments  A. F. Johnson	1
Discussion of Invited Papers  On the Determination of Single Sampling Attribute Plans Based Upon a Linear Cost Model and a Prior Distribution  On Detecting a Signal in N Stationarily Correlated Noise Series Best Linear Invariant Estimation for Weibull Parameters Under  An Exact Lower Confidence Bound for the Reliability of a Series System Where Each Component Has an Exponential Time to Failure Distribution  Reliability Estimation for the Generalized Gamma Distribution and Robustness of the Weibull Model	Designs of Experiments as 'Doubly Telescoping' Sequences of Blocks with Application to a Nuclear Reacto Experiment  A. G. Holms and S. M. Sidi  A. F. Johnson  A. F. Johnson
Discussion of Invited Papers  On the Determination of Single Sampling Attribute Plans Based Upon a Linear Cost Model and a Prior Distribution  W. C. Guenther On Detecting a Signal in N Stationarily Correlated Noise Series Best Linear Invariant Estimation for Weibull Parameters Under Progressive Censoring  N. R. Mann	Exponential Time to Failure Distribution  1. A. Sarka Reliability Estimation for the Generalized Gamma Distribution and Robustness of the Weibull Model
Discussion of Invited Papers  S. E. Michaels and R. W. Helms On the Determination of Single Sampling Attribute Plans Based Upon a Linear Cost Model and a Prior Dis-	tribution W. C. Guenne On Detecting a Signal in N Stationarily Correlated Noise Series R. H. Shumwa, Rest Linear Invariant Estimation for Weibull Parameters Under Progressive Censoring N. R. Man.
Elimination of Linear Parameters in Nonlinear Regression W. H. Lawton and E. A. Sylvestre	Mean Square Error of Prediction as a Criterion for Selecting Variables  D. M. Alle. Discussion of Invited Papers  S. E. Michaels and R. W. Helm On the Determination of Single Sampling Attribute Plans Based Upon a Linear Cost Model and a Prior Dis

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington, D. C. 20004.
