810 18th Street, N.W.
Washington 6, D. C.

BOOKS

CONTRIBUTIONS TO ORDER STATISTICS

Edited by Ahmed E. Sarhan, Alexandria University, Egypt, and Bernard G. Greenberg, University of North Carolina.

The modern trend in applied statistics, especially in industry, is to use methods based on ordered samples. This monograph, the first to cover this field, is arranged in two sections; the first presenting mathematical and theoretical foundations and the second indicating specific applications, and providing a wealth of formulas and convenient tables to help the research worker use order statistics and adopt its procedures to various problems. The illustrative examples are in life testing and longevity, quality control, and other areas of interest to the applied statistician.

The contributors have all been instrumental in bringing about the recent advances in order statistics.
