

ANNALS OF PROBABILITY

Vol. 7,

June 1979

No. 3

Articles

- Prediction processes and an autonomous germ-Markov property
FRANK B. KNIGHT
- Infinite divisibility in stochastic processes H. D. MILLER
- Renormalizing the 3-dimensional voter model
MAURY BRAMSON AND DAVID GRIFFEATH
- Existence of independent complements in regular conditional probability
spaces D. RAMACHANDRAN
- Perfect mixtures of perfect measures D. RAMACHANDRAN
- Maxima and minima of stationary sequences RICHARD A. DAVIS
- On stationarity and absolutely continuous houses
LESTER E. DUBINS AND WILLIAM D. SUDDERTH
- Local sample path properties of Gaussian fields
LOREN D. PITT AND LANH TAT TRAN
- Infinitely divisible distributions with unimodal Lévy spectral func-
tions THOMAS A. O'CONNOR
- A central limit theorem for piecewise monotonic mappings of the unit
interval SHERMAN WONG
- Time-dependent functions of Brownian motion that are Mar-
kovian ALBERT T. WANG

Short Communications

- A local limit theorem for large deviations of sums of independent,
nonidentically distributed random variables DAVID McDONALD
- The range of Lévy's N -parameter Brownian motion in d -space
LANH TAT TRAN
- Further results on one-dimensional diffusions with time parameter set
 $(-\infty, \infty)$ J. THEODORE COX
- Note on the Ray-Knight compactification JOSEPH GLOVER
- Lower bounds for the multivariate normal Mills' ratio
GEORGE P. STECK
