

THE ANNALS OF PROBABILITY

VOLUME 3

AUGUST 1975

No. 4

Articles

- A predictive view of continuous time processes FRANK B. KNIGHT
On a problem of Cox concerning point processes in R^k of "controlled
variability" P. GÁCS AND D. SZÁSZ
On sequences of "pure heads" J. KOMLOS AND G. TUSNADY
Semigroups of conditioned shifts and approximation of Markov processes
THOMAS G. KURTZ
Ergodic theorems for weakly interacting infinite systems and the voter
model RICHARD A. HOLLEY AND THOMAS M. LIGGETT
Extreme time of processes with stationary independent increments
PRISCILLA GREENWOOD
A limit theorem for partially observed Markov chains . . . THOMAS KAIJSER
Stable densities under change of scale and total variation inequalities
MAREK KANTER
A functional central limit theorem for stationary random fields
CHANDRAKANT M. DEO

Short Communications

- On quadratic variation of processes with Gaussian increments
RUBEN KLEIN AND EVARIST GINÉ
An example in which stationary strategies are not adequate
LESTER E. DUBINS AND WILLIAM D. SUDDERTH
A general Poisson approximation theorem R. J. SERFLING
Entropy zero \times Bernoulli processes are closed in the d -metric
PAUL SHIELDS AND J.-P. THOUVENOT
On derivatives of characteristic functions STEPHEN J. WOLFE

Notes

- Acknowledgment of priority to "A new formula for $P(R_i \leq b_i, 1 \leq i \leq m \mid m, n, F = G^k)$ " G. P. STECK
