## STATISTICS

*AN OFFICIAL JOURNAL OF THE  
INSTITUTE OF MATHEMATICAL STATISTICS*

**Asymptotic Theory**

- |  |             |      |
|--|-------------|------|
| Incidental versus random nuisance parameters . . . . .   | J. PFANZAGL | 1663 |
| The rate of convergence for multivariate sampling statistics<br>ERWIN BOLTHAUSEN AND FRIEDRICH GÖTZE |             | 1692 |

**Censored Data**

- |   |  |      |
|---|--|------|
| On a simple estimation procedure for censored regression models<br>with known error distributions . . . . . | LEO BREIMAN, YACOV TSUR AND AMOS ZEMEL | 1711 |
| Some new estimators for Cox regression . . . . .  | PETER SASIENI                          | 1721 |
| Conditional rank tests for the two-sample problem under random censorship<br>GEORG NEUHAUS                  |  | 1760 |

**Resampling**

- |  |                               |      |
|--|-------------------------------|------|
| Bootstrap confidence regions for functional relationships<br>in errors-in-variables models . . . . .     | JAMES G. BOOTH AND PETER HALL | 1780 |
| On the least squares cross-validation bandwidth in hazard rate estimation . . . . .                      | P. N. PATIL                   | 1792 |
| Consistency of the generalized bootstrap for degenerate $U$ -statistics<br>MARIE HUŠKOVÁ AND PAUL JANSEN |                               | 1811 |

**Robustness**

- |   |              |      |
|---|--------------|------|
| A minimax-bias property of the least $\alpha$ -quantile estimates<br>VICTOR J. YOHAI AND RUBEN H. ZAMAR |              | 1824 |
| Aspects of robust linear regression . . . . .   | P. L. DAVIES | 1843 |

**Regression Models**

- |  |                                  |      |
|--|----------------------------------|------|
| Nonparametric regression with errors in variables . . . . .                                | JIANQING FAN AND YOUNG K. TRUONG | 1900 |
| Comparing nonparametric versus parametric regression fits<br>W. HÄRDLE AND E. MAMMEN       |                                  | 1926 |
| The expected number of local maxima of a random field and the volume<br>of tubes . . . . . | DAVID SIEGMUND AND HEPING ZHANG  | 1948 |

**Multivariate**

- |  |                             |      |
|--|-----------------------------|------|
| Probability-centered prediction regions . . . . .  | RUDOLF BERAN                | 1967 |
| Random discriminants . . . . .   | I-LI LU AND DONALD RICHARDS | 1982 |
| Logical and algorithmic properties of conditional independence<br>and graphical models . . . . . | DAN GEIGER AND JUDEA PEARL  | 2001 |

**Time Series**

- |  |              |      |
|--|--------------|------|
| Adaptive estimation in noncausal stationary AR processes . . . . .             | E. GASSIAT   | 2022 |
| Extremal index estimation for a weakly dependent stationary sequence . . . . . | TAILEN HSING | 2043 |

**Design**

- |  |                  |      |
|--|------------------|------|
| Trend-free run orders of mixed-level fractional factorial designs . . . . .                            | DANIEL C. COSTER | 2072 |
| On the Yeh-Bradley conjecture on linear trend-free block designs<br>FENG-SHUN CHAI AND DIBYEN MAJUMDAR |                  | 2087 |
| Asymptotic inference with response-adaptive treatment allocation designs<br>WILLIAM F. ROSENBERGER     |                  | 2098 |

**Bayesian Inference**

- |  |              |      |
|--|--------------|------|
| Nonparametric binary regression: A Bayesian approach<br>P. DIACONIS AND D. A. FREEDMAN |              | 2108 |
| A Bayesian method for weighted sampling . . . . .                                      | ALBERT Y. LO | 2138 |
| <i>continues on back cover</i>   |              |      |
