

## ADDENDUM TO *STRUCTURE OF HEREDITARY ORDERS*<sup>1</sup>

BY ARMAND BRUMER

Communicated by Daniel Zelinsky, October 1, 1963

In the hypothesis of Theorem 2, the following condition should be added: *Suppose  $\Omega$  is the unique maximal order in  $D$ .* This is satisfied in two important cases, namely if  $D = K$  or if  $R$  is complete.

One may obtain, by completion, explicit results when this hypothesis is removed, but they are somewhat more complicated and will be described elsewhere.
