## Going Sour

Science and Politics of Acid Rain

1985. 160 pages, Paperback sFr. 34.-/DM 41.-ISBN 3-7643-3251-4

Acid rain is the most controversial environmental problem of our time. For the first time in human history, pollution from the burning of coal and oil is altering the face of the planet on a global scale - damaging lakes and streams, forests, soils, and human health. Why is it that more than a hundred years after acid rain was first recognized as a threat, we still have not taken action to control the problem? GOING SOUR delves into the scientific, political, social, and economic issues behind the headlines, and presents a provocative glimpse of the behind-thescenes maneuvering that has thwarted a solution to the problem.

SCENCE AND POLITICS OF ACID RAIN
