

# Graphs and Combinatorics

No branch of mathematics has a history as long as combinatorics, and similarly, no branch of knowledge has such application to modern science. Research results in combinatorics are applied in computer science, artificial intelligence, communication networks, and space technology.

**Graphs and Combinatorics** is devoted to research concerning combinatorial mathematics. In addition to research papers and survey articles, it also features short communications, research problems, and announcements. Attention is paid to rapid publication, and researchers rely on **Graphs and Combinatorics** not only to keep themselves informed of current developments, but also use it as a forum for publishing their own work.
