Theoretical and Computational Fluid Dynamics

Theoretical and Computational Fluid Dynamics grasps the symbiotic relationship existing between basic theory and the computation of flow physics by providing a philosophical foundation for complex physical phenomena in flows of fundamental scientific or engineering interest. This new journal reports original research of scholarly value in theoretical and computational fluid dynamics aimed at elucidating flow physics in the areas of fluid mechanics such as transition and turbulence, hydrodynamic stability, convection, geophysical fluid dynamics, gas dynamics and non-Newtonian flows. Topics covered include:

- combined computational and experimental approaches gaining insight into complex flow physics
- fundamental theoretical analysis presented to complement and/or explain computationally observed phenomena
- basic mathematical theory of fluid mechanics, particularly with computational implications as opposed to analytical papers dealing with a particular flow problem.

Contents of recent issues:

Volume 1, Number 1, 1989

M. Y. Hussaini: Editorial. - *C. G. Speziale*: Turbulence Modeling in Noninertial Frames of Reference. - *R. V. Brotherton-Ratcliffe and F. T. Smith*: Viscous Effects can Destabilize Linear and Nonlinear Water Waves. - *T. A. Zang and S. E. Krist*: Numerical Experiments on Stability and Transition in Plane Channel Flow.

Volume 1, Number 2, 1989

W. D. Henshaw, H. O. Kreiss, and L. G. Reyna: On the Smallest Scale for the Incompressible Navier-Stokes Equations. - *R. T. Jones*: The Minimum Drag of Thin Wings at Supersonic Speed According to Kogan's Theory. - *J. S. B. Gajjar and J. W. Cole*: The Upper-Branch Stability of Compressible Boundary-Layer Flows.

Volume 1, Number 3, 1989

P. Hall and Yibin Fu: On the Görtler Vortex Instability Mechanism at Hypersonic Speeds. - *S. Tanveer*: Analytic Theory for the Determination of Velocity and Stability of Bubbles in a Hele-Shaw Cell. Part I: Velocity Selection. - Part II: Stability. - *A. M. Bloch and J. E. Marsden*: Controlling Homoclinic Orbits.

... and forthcoming papers:

N. Aubry, J. L. Lumley, and P. Holmes: The Effect of Modeled Drag Reduction on the Wall Region. - *P. W. Carpenter, J. S. B. Gajjar*: A general theory for two- and three-dimensional wall-mode instabilities in boundary layers over isotropic and anisotropic compliant walls. - *D. D. Joseph, J. C. Saut*: Short-Wave Instabilities and Ill-Posed Initial-Value Problems. - *W. Kollmann*: The pdf Approach to Turbulent Flow. - *J. S. Marshall, P. M. Naghdi*: Wave Reflection and Transmission by Steps and Rectangular Obstacles in Channels of Finite Depth
