

Homology, Homotopy and Applications

Volume 1 (1999)

1. Groupoids and crossed objects in algebraic topology Ronald Brown	1–78
2. A homotopy 2-groupoid from a fibration K.H. Kamps and T. Porter	79–93
3. The Boardman Category of spectra, Chain complexes and (Co-)Localizations Friedrich W. Bauer	95–116
4. Higher Homotopy Groupoids and Toda Brackets K.A. Hardie, K.H. Kamps and R.W. Kieboom	117–134
5. K -theory of affine toric varieties Joseph Gubeladze	135–145
6. A Categorical Guide to Separation, Compactness and Perfectness Walter Tholen	147–161
7. Computing Second Cohomology of Finite Groups with Trivial Coefficients Graham Ellis and Irina Kholodna	163–168
8. Operations and Quantum Doubles in Complex Oriented Cohomology Theory Victor M. Buchstaber and Nigel Ray	169–185
9. Non-abelian tensor and exterior products modulo q and universal q -central relative extension of Lie algebras Emzar Khmaladze	187–204
10. On spaces of the same strong n -types Yves Flix and Jean-Claude Thomas	205–217
