

Homology, Homotopy and Applications

Volume **11**(1), 2009

1. A universal property for $Sp(2)$ at the prime 3 Jelena Grbić and Stephen Theriault	1–15
2. Umkehr maps Ralph L. Cohen and John R. Klein	17–33
3. Homotopy theory of presheaves of Γ -spaces Håkon Schad Bergsaker	35–60
4. Homotopy nilpotency in localized $SU(n)$ Daisuke Kishimoto	61–79
5. Flat cyclic Fréchet modules, amenable Fréchet algebras, and approximate identities A.Yu. Pirkovskii	81–114
6. Local acyclic fibrations and the de Rham complex Ben Lee	115–140
7. Classifying rational G -spectra for finite G David Barnes	141–170
8. A homotopical algebra of graphs related to zeta series Terrence Bisson and Aristide Tsemo	171–184
9. Models and van Kampen theorems for directed homotopy theory Peter Bubenik	185–202
10. On $H^*(\mathcal{C}; k^\times)$ for fusion systems Markus Linckelmann	203–218
