

*Announcing a new series of books*

## **Proceedings of Symposia in Pure Mathematics**

# **FINITE GROUPS**

The eleven articles in this book are texts of addresses which were delivered at a symposium held in April, 1959. The discussions at the symposium were lively and served to indicate an enormous renewed interest in one of the oldest branches of algebra. The major new results in the field which are brought out in this book should serve to stimulate research activity in the Theory of Groups, one of the most beautiful subjects of mathematics.

### **CONTENTS**

Finite groups with normal $p$ -complements	<b>J. G. Thompson</b>
Burnside groups and Engel rings	<b>R. C. Lyndon</b>
On the structure of certain solvable groups	<b>Daniel Gorenstein</b>
On groups which contain Frobenius groups as subgroups	<b>Walter Feit</b>
Current studies on permutation groups	<b>Marshall Hall, Jr.</b>
Review of some results in collineation groups	<b>Daniel Hughes</b>
On finite groups with geometrical properties	<b>Wilhelm Magnus</b>
Symmetrical definitions for the binary polyhedral groups	<b>H. S. M. Coxeter</b>
Applications of group characters	<b>Michio Suzuki</b>
On maximal subgroups	<b>W. E. Deskins</b>
On an application of the theory of Lie algebras to group theory	<b>Hans Zassenhaus</b>
<b>120 pages</b>	<b>\$3.90</b>

*25% discount to members*
