CONTENTS

|                                                                                                                                                                         |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| On the Use of Green's Function<br>in Sampling Theory<br>By M.H. ANNABY AND A.I. ZAYED .....                                                                             | 117 |
| BPX Preconditioner for Hypersingular<br>Integral Equations<br>By THANG CAO .....                                                                                        | 141 |
| Existence and Stabilization of Solutions<br>to the Phase-Field Model with Memory<br>By PIERLUIGI COLLI AND PHILIPPE LAURENÇOT .....                                     | 169 |
| Abstract Hyperbolic Volterra<br>Integrodifferential Equations<br>By YUHUA LIN AND NAOKI TANAKA .....                                                                    | 195 |
| On the Backward Euler Method for Time Dependent<br>Parabolic Integro-Differential Equations<br>with Nonsmooth Initial Data<br>By AMIYA K. PANI AND RAJEN K. SINHA ..... | 219 |
