

# DIRICHLET PROBLEMS ON RIEMANN SURFACES AND CONFORMAL MAPPINGS

MAKOTO OHTSUKA

## Contents

### Introduction

- Chapter I. Perron-Brelot's method and the types of Riemann surfaces.
1. Perron-Brelot's method.
  2. The types of Riemann surfaces.
- Chapter II. Existence problems.
1. Existence theorem on  $\mathfrak{R}$  with positive boundary.
  2. Existence theorem on  $\mathfrak{R}$  with null boundary.
  3. Variation of preassigned singularities.
  4. The simplest harmonic functions on  $\mathfrak{R}$ .
- Chapter III. Boundary correspondences in conformal mappings.
1. One-to-one correspondence between boundaries.
  2. Measure of the image of the accessible boundary points.
  3. Mapping of an abstract Riemann surface.
  4. Regular points.
  5. Ideal boundary components.
  6. Parabolic fixed points.
  7. Hyperbolic fixed points.
  8. Non-fixed singular points.
- Chapter IV. Dirichlet problems.
1. Problem on an open compact set in  $\mathfrak{R}$ .
  2. Problem on  $\mathfrak{R}$  as a covering surface.
  3. Applications.
  4. Regular points.
- Chapter V. Conformal mapping of a Riemann surface with a rectifiable boundary.
1. A lemma from the theory of cluster sets.
  2. Measure-theoretic lemmas.
  3. Rectifiability of boundary of a Riemann surface.
  4. Continuity of the mapping function.
  5. Correspondence of null sets.
  6. Equalities for the length.
