

IMS LECTURE NOTES — MONOGRAPH SERIES

This series provides an avenue for the rapid, but carefully refereed, publication of important research results in comprehensive form and expository style. These volumes should be of great value to researchers and advanced students in statistics, probability, and related fields. The series editor is Shanti S. Gupta, Purdue University.

4 ZONAL POLYNOMIALS

by *Akimichi Takemura*

A self-contained development of zonal polynomials in the framework of standard multivariate analysis.

Zonal polynomials have been used extensively in the study of noncentral multivariate distributions. This easily understood treatment uses only the standard tools of linear algebra and multivariate normal distribution theory.

110 pages

5 INEQUALITIES IN STATISTICS AND PROBABILITY

edited by *Y. L. Tong*

Proceedings of the Symposium on Inequalities in Statistics and Probability held in Lincoln, Nebraska during October 1982.

This volume reports on the recent rapid growth in the field of inequalities due, in part, to widespread applications in reliability theory, in multivariate nonnormal analysis, and in optimization and constraint problems. The volume contains thirty expository and research papers by leaders in the field.

6 THE LIKELIHOOD PRINCIPLE

by *James Berger and Robert Wolpert*

A comprehensive presentation and criticism of the likelihood principle and its generalizations.

This book provides a non-technical development of the likelihood principle with attention to some of its surprising implications for such areas as randomization analysis, censoring, significance testing, and sequential analysis. The authors also discuss generalizations and implementations of the likelihood principle.

& ADDITIONAL TITLES

Previously published: Volume 1, *Essays on the Prediction Process* by Frank Knight (\$15/members \$9); Volume 2, *Survival Analysis* edited by John Crowley and Richard A. Johnson (\$25/members \$15); Volume 3, *Empirical Processes* by Peter Gaenssler (\$20/members \$12). Forthcoming: *Fundamentals of Statistical Exponential Families* by L. Brown, *Approximate Computations of Expectations* by C. Stein, *Adaptive Statistical Procedures and Related Topics* edited by T. L. Lai and J. Van Ryzin, *Differential Geometry in Statistical Inference* by S. Amari, O. Barndorff-Nielsen, R. Kass, S. Lauritzen, and C. R. Rao, and *Group Theory in Statistics* by P. Diaconis.

Prepaid orders for individual volumes and requests for standing order enrollment (eligible for 20% prepublication discounts from list prices) should be sent to
