

ANNALES DE L'INSTITUT HENRI POINCARÉ PROBABILITÉS ET STATISTIQUES

A nonasymptotic theorem for unnormalized Feynman–Kac particle models <i>F. Cérou, P. Del Moral and A. Guyader</i>	629–649
Conservation property of symmetric jump processes <i>J. Masamune and T. Uemura</i>	650–662
Maximal displacement for bridges of random walks in a random environment <i>N. Gantert and J. Peterson</i>	663–678
Spectral gaps and exponential integrability of hitting times for linear diffusions <i>O. Loukianov, D. Loukianova and S. Song</i>	679–698
Kolmogorov equation associated to the stochastic reflection problem on a smooth convex set of a Hilbert space II <i>V. Barbu, G. Da Prato and L. Tubaro</i>	699–724
Variational representations for continuous time processes <i>A. Budhiraja, P. Dupuis and V. Maroula</i>	725–747
Second-order asymptotic expansion for a non-synchronous covariation estimator <i>A. Dalalyan and N. Yoshida</i>	748–789
Sampling the Fermi statistics and other conditional product measures <i>A. Gaudillièvre and J. Reygnier</i>	790–812
Scaling limit of the random walk among random traps on \mathbb{Z}^d <i>J.-C. Mourrat</i>	813–849
Excursions of diffusion processes and continued fractions <i>A. Comtet and Y. Tourigny</i>	850–874
(Homogeneous) Markovian bridges <i>V. Vigon</i>	875–916
A Ciesielski–Taylor type identity for positive self-similar Markov processes <i>A. E. Kyprianou and P. Patie</i>	917–928
