

# JOURNAL OF THE AMERICAN STATISTICAL ASSOCIATION

Volume 67

December 1972

Number 340

## Applications

- Statistics and Political Science . . . . . James L. Hutter  
The Distribution by Age of the Frequency of First Marriage in a Female Cohort . . . . . A. J. Coale and D. R. McNeil  
Stochastic Simulation of Monetary Rules in Two Macroeconometric Models . . . . . J. Phillip Cooper and Stanley Fischer  
Inference for Markov Chains Having Stochastic Entry and Exit . . . . . George T. Duncan and Lizbie G. Lin  
A Model Search Technique for Predictive Nominal Scale Multivariate Analysis . . . . . Robert Messenger and Lewis Mandell  
The American Jury: A Critique . . . . . A. E. Bottoms and Monica A. Walker  
An Application of Multivariate Analysis to Complex Sample Survey Data . . . . . Gary G. Koch and Stanley Lemeshow  
A Linear Models Approach to the Analysis of Survival and Extent of Disease in Multi-Dimensional Contingency Tables . . . . . Gary G. Koch, William D. Johnson and H. Dennis Tolley  
The Keynesian Aggregate Supply Function for Labor . . . . . James M. Holmes  
Note on Owner's Estimate of Housing Value . . . . . John F. Kain and John M. Quigley  
The Distribution of Stock Returns . . . . . R. R. Officer  
Asymmetric Stable Distributions of Stock Price Changes . . . . . B. D. Fielitz and E. W. Smith

## Theory and Methods

- Linear Dynamic Recursive Estimation from the Viewpoint of Regression Analysis . . . . . D. B. Duncan and S. D. Horn  
Dependence and Aging Aspects of Multivariate Survival . . . . . E. C. Brindley, Jr. and W. A. Thompson, Jr.  
Interrelated Bernoulli Processes . . . . . Gordon R. Antelman  
Estimation in Univariate and Multivariate Stable Distributions . . . . . S. James Press  
Asymptotically Optimal Group Rank Tests for Location . . . . . Richard A. Groeneveld  
Asymptotic Behavior of Two-Sample Tests Based on Powers of Ranks for Detecting Scale and Location Alternatives . . . . . Paul W. Mielke, Jr.  
A Distribution-Free Normal Scores Test for Ordered Alternatives in the Randomized Block Design . . . . . Walter R. Pirie and Myles Hollander  
More on Concepts of Statistical Evidence . . . . . Allan Birnbaum  
An Analysis of a Two-Way Model with Interaction and No Replication . . . . . Dallas E. Johnson and Franklin A. Graybill  
Optimal Designs for Estimating the Slope of a Polynomial Regression . . . . . V. N. Murty and W. J. Studden  
Test Data for Statistical Algorithms: Least Squares and ANOVA . . . . . W. Keith Hastings  
Elicitation of Subjective Probabilities by Sequential Choices . . . . . Arlo D. Hendrickson and Robert J. Buehler  
Upper and Lower Probability Inferences from Ordered Multinomial Data . . . . . Herbert Weisberg  
The Fitting of Straight Lines When Both Variables Are Subject to Error and the Ranks of the Means Are Known . . . . . James H. Ware  
A Gaussian Approximation to the Distribution of a Definite Quadratic Form . . . . . D. R. Jensen and Herbert Solomon  
Properties of the Bivariate Normal Cumulative Distribution . . . . . Dennis P. Tihansky  
Two Distributions Involving a Bessel Function . . . . . G. M. Kaufman  
Products of Independent Beta Variables with Application to Connor and Mosiman's Generalized Dirichlet Distribution . . . . . Ian R. James  
Estimation for Domains in Multi-Stage Sampling . . . . . Myint Tin and Than Toe  
On the Asymptotic Power of Tests for Independence in Contingency Tables from Stratified Samples . . . . . Gad Nathan  
Continuous Sequential Testing of a Poisson Process to Minimize the Bayes Risk . . . . . Harland F. Romberg  
Estimation and Hypothesis Testing for the Parameters of a Bivariate Exponential Distribution . . . . . Bruce M. Bemis, Lee J. Bain and James J. Higgins  
Estimation of the Slope and Analysis of Covariance When the Concomitant Variable is Measured with Error . . . . . James S. DeGracie and Wayne A. Fuller  
Simultaneous Prediction Intervals to Contain the Standard Deviations or Ranges of Future Samples from a Normal Distribution . . . . . Gerald J. Hahn  
A Probabilistic Model for Identifying Errors in Data Editing . . . . . Joseph I. Naus, Thomas G. Johnson and Ramiro Montalvo

# TECHNOMETRICS

*A Journal of Statistics  
for the Physical, Chemical and Engineering Sciences*

## CONTENTS

TECHNOMETRICS, Vol. 14, No. 4, NOVEMBER, 1972

Models and Estimation Methods in Visual Scanning Experiments	Latitha Sanathanan
Statistical Inference from Censored Weibull Samples	Barry R. Billmann, Charles E. Antle and Lee J. Bain
Estimation in a Poisson Process Based on Combinations of Complete and Truncated Samples	A. Clifford Cohen
Extension of Sample Sizes and Percentage Points for Significance Tests of Outlying Observations	Frank E. Grubbs and Glenn Beck
Table of the Percentage Points of the Trivariate $t$ -Distribution with an Application to Uniform Confidence Bands	Richard Trout and Bryant Chow
Computer Evaluation of the Multivariate Normal Integral	Roy C. Milton
Computer Solution of the Discrete Maximum Entropy Problem	David Griffeath
Probability of Equipment Failure when Tolerances are Incorrect	Lance W. Jayne and Edward W. Ross, Jr.
The Identification Problem for a Mixture of Observations from Two Normal Populations	P. R. Raymont
On the Distribution of a Symmetric Statistic from a Mixed Population	Javad Behboodian
A Simplified Form of the ASN for a Curtailed Sampling Plan	D. K. Shah and A. G. Phatak
Choosing the Optimum Lot Size for a Reordering Policy with Instantaneous Emergency Deliveries	Edwin L. Bradley and J. G. Saw
Estimating the Expected and the Optimal Probabilities of Misclassification	Marilyn Sorum
Theory and Applications of Hazard Plotting for Censored Failure Data	Wayne Nelson

### NOTES

Criteria for Selection of a Subset Regression: Which One Should be Used	Ronald R. Hocking
On Yates' Order in Fractional Factorial Designs	Paul D. Berger
A Note on Multiple Solutions to the Mixed Distribution Problem	Richard H. Hawkins

### BOOK REVIEWS

### LETTER TO THE EDITOR

### CORRIGENDUM

### EDITORIAL COLLABORATORS

### INDEX TO VOLUME 14, 1972

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal publishes papers describing new statistical techniques expected to be useful in these sciences, and papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station, Washington, D. C. 20004.

# BIOMETRICS

*Journal of the Biometric Society*

Vol. 28, No. 4

## CONTENTS

December 1972

The statistical analysis of chain-binomial epidemic models with several kinds of susceptibles	J. J. Gar
The multifactorial model for the inheritance of liability to disease and its implications for relatives at risk	R. N. Curnow
Estimation of microbial viability	V. J. Thomas, N. A. Doughty, R. H. Fletcher, and J. G. Robertson
Inverse sampling of a Poisson distribution	H. Weiler
Inverse binomial sampling as a basis for estimating negative binomial population densities	D. J. Gerrard and R. D. Cook
Quantal response analysis for a mixture of populations	J. R. Ashford and P. J. Walker
Asymptotic and small-sample behavior of estimated Bayes rules for classifying time-dependent observations	S. P. Azen and A. A. Afifi
Bayesian estimation and design of experiments for growth rates when sampling from the Poisson distribution	D. W. Behnken and D. G. Watts
Double sampling with regression in comparative studies of carcass composition	D. Conniffe and M. A. Moran
Hybrid polynomial and periodic regression with and without missing observations	W. J. Housworth
Some designs and analyses for temporally independent experiments involving correlated bivariate responses	S. C. Wu, J. S. Williams, and P. W. Mielke, Jr.
An invariant test for the homogeneity of variances in a two-way classification	G. K. Shukla
Convolution approach to the genetic analysis of quantitative characters of self-fertilized populations	W. Y. Tan and W. C. Chang
Expected selection differentials for directional selection	P. M. Burrows
Genetic information given by a relative	A. Jacquard
Estimating selective values from field data	B. F. J. Manly

### NOTES

Correlation for power functions	J. Good
A characterization on misspecification in the general linear regression model	S. H. Rosenberg and P. S. Levy
A further note on the probability of disease transmission	D. A. Griffiths

*Biometrics* is published quarterly. Its objects are to describe and exemplify the use of mathematical and statistical methods in biological and related sciences in a form assimilable by experimenters. Inquiries should be addressed to: Biometrics Business Office, Department of Experimental Statistics, North Carolina State University, Raleigh, North Carolina 27607.

# THE ANNALS OF MATHEMATICAL STATISTICS

## INSTRUCTIONS FOR AUTHORS

**Submission of Papers.** Papers to be submitted for publication should be sent to the Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with two additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

**Preparation of Manuscripts.** Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

**Submission of Reference Papers.** Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

**Title and Abbreviated Title.** The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law," with the running head "Limit Theorem for Recurrent Random Walk" or possibly "Recurrent Random Walk Attracted to a Stable Law", depending on the emphasis to be conveyed.

**Abstract.** Each manuscript is required to contain an abstract, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of an abstract will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Abstract", followed by the title of the paper. Formulas should be used as sparingly as possible. The abstract should not make reference to results or formulas in the body of the paper—it should be self-contained.

**Footnotes.** Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

**Key Words.** Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1970 subject classification. Primary—; Secondary—.

Key words and phrases:

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use, as an Appendix to *Mathematical Reviews* Index to Volume 39, June 1970. (See, also, *The Notices of the American Mathematical Society*, June 1970, pp. 616–618, for more details.) The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

**List of Symbols.** A completely typewritten list of symbols, identified typographically, not mathematically, should be attached to the manuscript on a separate page. Distinguish between "oh" and "zero"; "ell" and "one"; "kappa" and "kay", etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics.

**Figures and Tables.** Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

**Formulas.** Fractions in the text are preferably written with the solidus or negative exponent; thus,  $(a + b)/(c + d)$  is preferred to  $\frac{a + b}{c + d}$ , and  $(2\pi)^{-1}$  or  $1/(2\pi)$  to  $\frac{1}{2\pi}$ . Also,  $a^{b(c)}$  and  $a_{b(c)}$  are preferred to  $a^{bc}$  and  $a_{bc}$ , respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

**References.** References should be typed double-spaced and should follow the style:

[5] Wilks, S. S. (1938). The large-sample distribution of the likelihood ratio for testing composite hypotheses. *Ann. Math. Statist.* **9** 60–62.

In textual material, the format "... Wilks (1938) ..." is normally preferred to "... Wilks [5] ...". Multiple references can be distinguished as "... Wilks (1938a) ...". Abbreviations for journals should be taken from *Mathematical Reviews* Index to Volume 40, 1970, pp. 1683–1702.

**Proofs.** Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.)

## Contents (Continued)

- A note on fine and tight qualitative probabilities..... ILKKA NIINILUOTO 1581
- Error estimates for the weak convergence to certain infinitely  
divisible laws..... THOMAS A. HERN 1592
- Coding theorem for stationary, asymptotically memoryless,  
continuous-time channels..... T. T. KADOTA AND A. D. WYNER 1603
- Markovian decision processes with compact action spaces..... NAGATA FURUKAWA 1612
- Stochastic order relationships between GI/G/k systems  
DAVID R. JACOBS, JR. AND SIEGFRIED SCHACH 1623
- A representation of independent increment processes without  
Gaussian components..... THOMAS S. FERGUSON AND MICHAEL J. KLASS 1634

### Short Communications

- Completeness for a family of multivariate normal distributions..... JUSTUS SEELY 1644
- Alternative axiomatizations of one-way expected utility..... PETER C. FISHBURN 1648
- Construction of two-level saturated symmetrical factorial designs  
of resolution VI..... BODH RAJ GULATI 1652
- On the marginal distributions of the latent roots of the multivariate  
beta matrix..... A. W. DAVIS 1664
- The asymptotic non-central distribution of Hotelling's  
generalized  $T_0^2$ ..... R. J. MUIRHEAD 1671
- Uniform strong consistency of Rao-Blackwell distribution  
function estimators..... FEDERICO J. O'REILLY AND C. P. QUESENBERRY 1678
- On estimation of tail end probabilities of the sample mean  
for linear stochastic processes..... K. C. CHANDA 1680
- Rates of convergence for weighted sums of random variables..... F. T. WRIGHT 1687
- The law of the iterated logarithm for the range of random walk  
NARESH C. JAIN AND WILLIAM E. PRUITT 1692
- A note on the classical occupancy problem..... C. J. PARK 1698
- A threshold for log-concavity for probability generating functions  
and associated moment inequalities..... J. KEILSON 1702
- A theorem on obstructive distributions..... R. A. WIJSMAN 1709
- Hitting time distributions for general stochastic processes.. DUDLEY PAUL JOHNSON 1716
- On limiting distributions of a random number of dependent random  
variables..... D. L. THOMAS 1719
- Convergence in distribution of random measures..... MILOSLAV JIŘINA 1727
- On two recent papers on ergodicity in nonhomogeneous Markov  
chains..... MARIUS IOSIFESCU 1732
- Conditions for metric transitivity for stationary Gaussian  
processes on groups..... JULIUS BLUM AND BENNETT EISENBERG 1737

### Notes

- Correction to "Admissible Bayes character of  $T^2$ -,  $R^2$ -, and other fully  
invariant tests for classical multivariate normal problems"  
J. KIEFER AND R. SCHWARTZ 1742
- Correction to "Multivariate procedures invariant under linear  
transformations"..... R. L. OBENCHAIN 1742
- Acknowledgment of priority to "On averaging over distinct units  
in sampling with replacement"..... R. M. KORWAR AND R. J. SERFLING 1744

### Book Review

- Review of "Foundations of Probability,"  
by Alfred Rényi..... FLAVIO RODRIGUES AND GORDON SIMONS 1745
-
