|                                                |                                                                                              | Page |
|------------------------------------------------|----------------------------------------------------------------------------------------------|------|
| P. J. van Albada, G. Laman, and J. H. van Lint | On the hermitian product of ordered point sets on the unit circle . . . . .                  | 245  |
| Silvio Aurora                                  | The embedding of certain metric fields . . . . .                                             | 123  |
|                                                | A note on certain connected metric division rings .                                          | 129  |
| A. Borel and J. C. Moore                       | Homology theory for locally compact spaces . . . .                                           | 137  |
| Glen E. Bredon                                 | Orientation in generalized manifolds and applications to the theory of transformation groups | 35   |
| L. Carlitz                                     | A note on the Laguerre polynomials . . . . .                                                 | 219  |
| Bomshik Chang                                  | The automorphism groups of the free group with two generators . . . . .                      | 79   |
| Paul Conrad                                    | The structure of a lattice-ordered group with a finite number of disjoint elements . . . . . | 171  |
| P. H. Doyle and J. G. Hocking                  | A characterization of Euclidean n-space . . .                                                | 199  |
| B. J. Eisenstadt and G. G. Lorentz             | Concave functions, rearrangements, and Banach lattices . . . . .                             | 161  |
| P. Erdős and A. Hajnal                         | Some remarks on set theory, VIII . . . . .                                                   | 187  |
| John Gary                                      | The topological structure of trajectories . . . . .                                          | 225  |
| Irving Glicksberg                              | A remark on some almost periodic compactifications . . . . .                                 | 133  |
| J. F. Gray                                     | Diagonal forms of odd degree over a finite field . .                                         | 297  |
| Emil Grosswald                                 | Partitions into prime powers . . . . .                                                       | 97   |
| A. Hajnal, see P. Erdős                        |                                                                                              |      |
| J. G. Hocking, see P. H. Doyle                 |                                                                                              |      |
| Marvin Isadore Knopp                           | Automorphic forms of nonnegative dimension and exponential sums . . . . .                    | 257  |
| Herbert Knothe                                 | On polyhedra in spaces of constant curvature . . . .                                         | 251  |
| G. Laman, see P. J. van Albada                 |                                                                                              |      |
| J. H. van Lint, see P. J. van Albada           |                                                                                              |      |
| Joseph Lehner                                  | The Fourier coefficients of automorphic forms and horocyclic groups, III . . . . .           | 65   |
|                                                | Representations of a class of infinite groups . . . . .                                      | 233  |
| G. G. Lorentz, see B. J. Eisenstadt            |                                                                                              |      |
| Gerald Losey                                   | On group algebras of p-groups . . . . .                                                      | 237  |

| Marvin Isadore Knopp                                                        |      |
| Automorphic forms of nonnegative dimension and exponential sums . . . . .   | 257  |
| L. J. Mordell                                                               |      |
| The representation of integers by three positive squares . . . . .          | 289  |
| Donald J. Newman                                                            |      |
| A simplified proof of Waring's conjecture . . . . .                         | 291  |
| J. F. Gray                                                                  |      |
| Diagonal forms of odd degree over a finite field . . . . .                  | 297  |
| H. H. Schaefer                                                              |      |
| On the completeness of topological vector lattices . . . . .                | 303  |

The Michigan Mathematical Journal is published by the University of Michigan Press, with support from the Horace H. Rackham School of Graduate Studies of The University of Michigan and from the National Science Foundation. Each volume consists of two or more issues of about 100 pages each. The price per issue is \$1 on orders for personal use, \$3 on orders for institutional use.

Manuscripts should be sent to G. Piranian, Dept. of Math., The University of Michigan, Ann Arbor, Mich.
