## Differentiable-, Continuous-, and Derivative-Restrictions of Measurable Functions

"Measurability" means measurability with respect to one of the  $\sigma$ -algebras:

where  $B$  = the Borel sets,  $U$  = the universally measurable sets,  $L$  = the Lebesgue measurable sets,  $B_r$  represents the sets with the Baire property (restricted sense),  $B_w$  represents the sets with the Baire property (wide sense).

The best known theorem of the type we are interested in is the following:

**THEOREM 1:** If  $f : \mathbb{R} \rightarrow \mathbb{R}$  is  $L$ -measurable, then

- 1) for every  $\epsilon > 0$ , there exists  $M$  with  $\lambda(M^c) < \epsilon$  such that  $f|_M$  is continuous [7],
- 2) there exists  $M$  with  $\lambda(M^c) = 0$  and a continuous (a.e. differentiable)  $F : \mathbb{R} \rightarrow \mathbb{R}$  such that  $f|_M = F'|_M$  [8],
- 3) there exists a perfect set  $P$  such that  $f|_P$ 
  - i) is monotonic [5],
  - ii) is  $C^\infty$  (relative to  $P$ ) [6]
  - iii)  $= g|_P$  for some  $C^1$   $g : \mathbb{R} \rightarrow \mathbb{R}$  [1].

**THEOREM 2:** If  $f : \mathbb{R} \rightarrow \mathbb{R}$  is  $B_w$ -measurable, then

- 1) there exists a co-FC set  $M$  such that  $f|_M$  is continuous [9],
- 2) there exists a smaller co-FC set  $M$  and a  $D^1$  function  $F$  such that  $f|_M = F'|_M$ ,
- 3) there exists a perfect set  $P$  such that  $f|_P$ 
  - i) is monotonic [5],
  - ii) is " $D^1$ " (relative to  $P$ ) [4],
  - iii)  $= f|_P$  for some " $C^1$ "  $g : \mathbb{R} \rightarrow \mathbb{R}$  [2].

**THEOREM 3:** If  $f : \mathbb{R} \rightarrow \mathbb{R}$  is (s)-measurable, then

- 1) there exists a perfectly dense subset  $M$  of  $\mathbb{R}$  (every open subset of  $\mathbb{R}$  contains a perfect subset of  $M$ ) such that  $f|_M$  is continuous [3],
- 2) there exists a smaller perfectly dense subset  $M$  of  $\mathbb{R}$  and a  $D^1$  function  $F : \mathbb{R} \rightarrow \mathbb{R}$  such that  $f|_M = F'|_M$ ,
- 3) {same as 3) of Theorem 2}.

We discuss in some detail the sharpness of each of these results. The proofs of some of the new results rely heavily on the theorems of [10].
