TOPICAL SURVEY

T. Natkaniec
Almost Continuity 462

RESEARCH ARTICLES

A. Alikhani-koopaei
Borel measurability of extreme local derivatives 521

G. Istrate
On two generalizations of Darboux property 535

M. Marano and H. Cuenya
Heredity of density points 545

H. Pawlak and R. Pawlak
On m-rings of functions and some generalizations of the notion of density point 550

Z. Grande
On the Darboux property of the sum of cliquish functions 571

E. Stronska
On the group generated by quasi continuous functions 577

H. Lee and I. Baek
On d-measure and d-dimension 590

M. Balcerzak
Some remarks on sup-measurability 597

K. Ciesielski and L. Larson
The Peano curve and I–approximate differentiability 608

H. Sikic
Riemann integral vs. Lebesgue integral 622

S. Chua
Restriction theorems on weighted Sobolev spaces of mixed norm .633

P. Kostyrko
Approximate symmetric derivatives are uniformly closed 652

The *Real Analysis Exchange* consists of four major sections, each with a distinct character. Papers submitted to the Research Articles section will be sent to three referees for their independent judgment, while papers submitted to the Inroads section are normally sent to two referees. Descriptions of each section of the *Real Analysis Exchange* follow.

Section 1: TOPICAL SURVEYS

This section consists of survey articles concerning one area of current research activity. These articles differ from survey articles in other journals both in their more limited scope and greater depth. It is anticipated that such a survey article will indicate a stream of mathematical thought from origins of the current problem area up to and including unpublished results. Topical survey articles are refereed and reviewed by *Mathematical Reviews*, *Zentralblatt für Mathematik* and *Referativnyi Zhurnal: Matematika.*

Section 2: RESEARCH ARTICLES

This section is reserved for original research in the areas of real analysis, functions of one or more real variables, and real set theory. As this section is intended for primary source material, the results published in this section should not appear in unabstracted form elsewhere. Papers submitted as research articles will be refereed prior to publication and reviewed by *Mathematical Reviews*, *Zentralblatt für Mathematik* and *Referativnyi Zhurnal: Matematika.*

Section 3: INROADS

Papers presenting new and simple proofs of well-known theorems, or simple and interesting consequences of known results may appear in this section. In addition a synopsis of a dissertation in real analysis could be appropriate if the results are not to appear in another journal. However, in general, abstracts of papers to be published elsewhere are not acceptable. Authors need not present proofs of all assertions in an inroads article, but when an omitted proof is not easy, the writer should so inform the reader. Inroads articles are refereed before publication and reviewed by *Referativnyi Zhurnal: Matematika.*

Section 4: QUERIES

In this section problems are presented together with appropriate bibliographical and historical information. This section is not meant to be a recreational section, but a forum for the presentation of unsolved problems in specific areas of real analysis.

NOTICE TO CONTRIBUTORS

1. Any author interested in writing a Topical Survey article should contact Professor Paul Humke, Department of Mathematics, St. Olaf College, Northfield, MN 55057, USA for detailed information.

2. Articles for the Inroads and Research Articles sections should be neatly typed and whenever possible submitted in LaTeX or some form of TeX either on disk or by electronic mail. Contributors should take note of the heading format for papers in these two sections. Papers for the Inroads section should be submitted to the Inroads Editor and those for the Research Articles section, to the Managing Editors. Addresses of these editors are listed on the first page of this issue. All articles will appear in the first issue following acceptance.

3. Queries should be typed with appropriate bibliographical and/or historical information included. They should be sent to the Queries Editor whose address is listed with the Editorial Board on the first page of this and every issue. Solutions to previous Queries should be typed using the instructions listed above and sent to the Queries Editor. Lengthy solutions may be published in the Inroads section at the discretion of the editors. The deadline for receipt of Queries is September 1 for the first issue of each volume and March 1 for the second.

4. All contributed papers, except for Queries, and all other correspondence with the Exchange should be sent to the following address:
