

ANNALES DE L'INSTITUT HENRI POINCARÉ

PROBABILITÉS ET STATISTIQUES

Change-point estimation from indirect observations. 1. Minimax complexity	<i>A. Goldenshluger, A. Juditsky,</i> <i>A. B. Tsybakov and A. Zeevi</i>	787–818
Change-point estimation from indirect observations. 2. Adaptation <i>A. Goldenshluger, A. Juditsky, A. Tsybakov and A. Zeevi</i>		819–836
Asymptotic Feynman–Kac formulae for large symmetrised systems of random walks	<i>S. Adams and T. Dorlas</i>	837–875
Random permutations and unique fully supported ergodicity for the Euler adic transformation	<i>S. B. Frick and K. Petersen</i>	876–885
A lattice gas model for the incompressible Navier–Stokes equation	<i>J. Beltrán and C. Landim</i>	886–914
Limit shapes of Gibbs distributions on the set of integer partitions: The expansive case <i>M. M. Erlihson and B. L. Granovsky</i>		915–945
Hitting time of a corner for a reflected diffusion in the square	<i>F. Delarue</i>	946–961
Near-minimal spanning trees: A scaling exponent in probability models	<i>D. J. Aldous, C. Bordenave and M. Lelarge</i>	962–976
On suprema of Lévy processes and application in risk theory	<i>R. Song and Z. Vondraček</i>	977–986
